Conversions & Specials

There are always projects that need a customised solution to achieve the compliance or architectural requirement. Our team of product and system engineers have designed and produced many emergency and exit luminaires for these types of applications.

Compliance

Critical applications like tunnels and hazardous areas always require an engineered solution to match the environment and design of the evacuation plan.

This is where the Clevertronics team is able to apply their experience in design and know-how to create the exit and emergency lighting outcome that is required to meet the prescribed standard.

Bringing it all together

Our state of the art engineering and testing capabilities allow us to take bespoke designs and prototypes and test them consistently throughout the process to ensure a timely outcome.

Each luminaire undertakes thermal, humidity and electrostatic discharge testing as well as photometric analysis before sending them to external laboratories for official certification.

Conversions & Specials

Aesthetically pleasing

There are buildings and applications where a standard emergency or exit luminaire doesn't quite fit the architectural nature of the building. In a heritage setting and also in a modern, architecturally designed building, a traditional exit sign might remove the look and feel of a particular space.

Clevertronics has engineered and designed bespoke exit luminaires to blend the compliance requirement into the personality of the building. We have worked with museums, churches, theatres, restaurants, entertainment venues and iconic places like the Sydney Opera House and the Old London War Office to achieve the right outcome.

Emergency Lighting Systems

Clevertronics has spent over twenty years developing dedicated emergency lighting systems that have one purpose; making it easier to achieve emergency lighting compliance. Easy to understand, install, test and maintain with a system of your choice.

Zoneworks XT HIVE

Zoneworks is the world's most advanced emergency lighting system with over 2,500 sites installed across Australia, New Zealand and the UK. Zoneworks XT HIVE reduces the backbone hardware requirements to a single RF controller with dynamic self-managed meshing technology, making your emergency lighting simpler, faster, reliable and more sustainable than ever before.

The functionality includes a clean web-based interface, both on PC and SMART devices. Integration with other networked building management services can be achieved seamlessly.

Testing and monitoring of all luminaires can be managed remotely to save time and money.

Advantage Lifetime Support

With the Zoneworks XT HIVE platform, Clevertronics also includes ongoing support through our complimentary Advantage Lifetime Support (ALS) program. This service is designed to help the building owner & maintenance contractor manage the on-going health for the life of the system.

DALI emergency lighting

DALI, the protocol supported by all the major lighting manufacturers, enables digital dimming, individual luminaire control, lamp and ECG status feedback and emergency test and monitoring – all over a robust and simple wiring solution.

Clevertronics manufactures a full range of DALI registered emergency lights and exit luminaires. All our DALI registered luminaires have been designed following IEC 62386-2-2.

Product and application support is always available for installers and integrators using Clevertronics DALI luminaires on a project.
