100% LUCITE CROSS LINKED ACRYLIC SHEET

Castano Baths are manufactured from 100% Lucite Cross Linked Acrylic Sheet, the most durable and UV resistant acrylic sheet available, which provides a High UV Resistance and High Chemical Resistance.

The story of Lucite Cross Linked Acrylic Sheet is that the acrylic sheet is made differently to other cast and extruded acrylic, due to the bond of cross linked technology that links one polymer chain to another creating a net structure within the acrylic sheet, providing a strong, durable acrylic sheet. When it comes to manufacturing baths, baths can be all sorts of shapes and sizes with tight radius internal corners.

100% Lucite Cross Linked Acrylic Sheet can be thermoformed at a lower temperature compared to other acrylics, providing on average a thickness of 3mm of acrylic sheet throughout the shape of the bath within the tight radius, ensuring no weak points during the manufacturing process. Lucite Cross-Linked Acrylic Sheet is generally thicker than most other acrylics used in the production of baths where tight radii are found in the shape of the bath. Lucite is owned by Lucite International Ltd a group company of Mitsubishi Chemical Ltd based in Japan.

Lucite Cross Linked Acrylic provides high resistance to hot water that is over 60 degrees which can provide a stable colour. Other types of acrylic sheets may be found to discolour over long periods when water is over 60 degrees. Cross Linked Acrylic Sheet used on baths is a requirement to meet EU standards such as CSN EN 263 Sanitary Products used in Europe.

Ensure your next bath is constructed from 100% Lucite Cross Linked Technology, backed by Castano's Australian Wide 25 Year Product Replacement Warranty.

Do it right the first time with 100% Lucite Cross Linked Acrylic Sheet.
