Our Story

Designer Fire Sprinklers was born out of an idea to protect the things that you love the most, the things insurance can't replace.

The fact that more than one Australian per week loses their life in a preventable home fire compelled me to take action.

Fire sprinklers offer a vital layer of defence. They are legally required to protect commercial properties, so why not residential too? They've proven time and time again to be highly effective in containing fires and providing precious time for escape.

— Raphael Corbett, Founder of Designer Fire Sprinklers

Our Values

Excellence

We understand that every project is unique, and we pay meticulous attention to detail in every aspect of our work.

Safety

We prioritise the safety of lives and properties above all else. Our systems are designed to provide effective fire protection and ensure the well-being of everyone in the building.

Innovation

We continually strive to stay at the forefront of the industry by investing in ongoing training and keeping up with the latest advancements in fire protection technology.

Integrity

We conduct our business with the highest level of integrity and professionalism.

Sustainability

We take pride in our workmanship, delivering high-quality fire sprinkler systems that are built to last.

How does it work?

Residential fire sprinklers are **activated by heat**, not smoke and **they operate individually**. This means you can contain a house fire and any subsequent damage to a single room in the home.

In **88% of cases, one sprinkler head is sufficient to extinguish a fire entirely**. This efficiency highlights the effectiveness of fire sprinkler systems in quickly controlling fires before they can spread, minimising damage and increasing safety.

Our Services

We are **Australia's leading provider** of residential fire sprinklers.

Our End to End Service

Design

Our design phase focuses on maximising coverage and efficiency while ensuring aesthetic integration into your home.

Supply

We source only the highest quality materials and components through strong relationships with our suppliers.

Install

Our experienced team works closely with other service providers on site; ensuring a seamless installation into your property.

Maintain

We offer extensive maintenance services to test, inspect and repair systems; ensuring they are in top condition.

The background of the image is a close-up, low-angle shot of a wooden ceiling. The wood is a medium-brown color with a prominent grain pattern. A recessed lighting fixture is visible, consisting of two parallel dark tracks that meet at a central point, forming a V-shape. The ceiling is illuminated from above, creating a soft glow. In the bottom left corner, the top of a window with light-colored, vertically pleated curtains is visible. The overall atmosphere is warm and modern.

At Designer Fire
Sprinklers, **we**
believe that all
homes deserve
both **exceptional**
aesthetics and
excellent fire
protection.

Did you know?

Sprinklers are designed to be **heat-activated** and typically trigger at a temperature of 68°C (155°F) or higher.

Fires in modern homes **spread in less than 5 minutes**. This is in comparison to older homes (built between 1950-70) which took around 29 minutes to spread.

In Australia between 2001 and 2019 there were **992 residential fire related deaths**. Whereas bushfire fatalities for this same period equated to less than 250.

A residential fire can **double in size** every 60 seconds and can reach 1000° Celsius in a few short minutes.

Residential Fire Sprinklers are **automatically heat activated** and they extinguish a fire within approximately 2 minutes of ignition.

The chances of a fire sprinkler operating by mistake are extremely rare, with only a **1 in 16 million** chance of accidental discharge.

Why Us?

We understand the unique needs of homeowners and work closely with architects, interior designers and builders to create fire protection solutions that enhance the value of your home.

House fires result in an average of **52 deaths** annually in Australia. That's more than floods, storms and bushfires combined.

We will **not overlook** the **safety** of your **loved ones.**

How we Compare

Sprinkler Protected Home	Function	Fire Brigade Response
50 Litres	Water expelled per minute	500 Litres
30-60 seconds	Response time	10 minutes
90°C	Maximum Temperature	1200°C
