DRO

Quadro NZ

Vol.17

Quadro is a young company - managed by young people too - born with the necessity to offer solutions rather than products. We innovate because we choose to combine noble and sophisticated materials such as stainless steel together with an essential, timeless, archetypal design.

INOX

STAINLESS STEEL

THE USE OF STAINLESS STEEL HAS ALWAYS BEEN OUR COMPANY'S KEY STRENGTH. ITS RESISTANCE, BEAUTY, ATOXICITY - TOGETHER WITH SEVERAL OTHER POSITIVE FEATURES - MAKE IT THE PERFECT ELEMENT TO BE USED IN THE KITCHEN. IN THE NEXT PAGES OUR COMPLETE RANGE OF STAINLESS STEEL KITCHEN TAPS.

STAINLESS STEEL ADVANTAGES

Stainless steel is a material well-known for the following characteristics:

- **Durability**

Stainless steel's alloying elements form a thin, transparent "passive layer" on the surface. Although this passive layer is only a few atoms thick, it instantaneously restores in presence of oxygen from air or water.

- **Riciclability**

The selection of stainless steel brings performance and the protection of our natural resources together, Actually the stainless steel industry has an excellent environmental track record:

use primary energy sparingly, save non-renewable resources and reduce the waste stream

- **Health and corrosion resistance**

Stainless steel is easy to be cleaned and for this reason it has been normally chosen in the food and catering industry. Obviously materials used normally at home must have all the necessary maintenances and there is no rule exception for the stainless steel. It could be easily cleaned, nevertheless it is extremely important to carry out the maintenance operation with care and through using suitable cleansing products that don't damage the passive layer distinguishing the material.

HOW TO CLEAN STAINLESS STEEL?

Some routine maintenance and cleaning is needed to keep stainless steel surfaces in good conditions so that the aesthetics appearance and corrosion resistance are not compromised.

Cleaning suggestions

- Mortar and cement splashes can be treated with a solution containing a small amount of phosphoric acid. Rinse with deionised water and dry.
- Iron particles picked up from tools or from structural steels, scaffold-tubing, etc and steel dust created during operation such as welding, cutting, drilling must be removed immediately as steel will rust quickly. Beside corroding themselves, these particles can locally break the self healing "passive film" of stainless steel resulting in pitting in spite of their normally good corrosion resistance.
- Soap water and a mild detergent are usually safe and successful. For more stubborn stains, cream cleansers should be effective.
- Limescale: if cream cleanser is not enough, treat scale with a 25% solution of vinegar and mild hot water and give it some time to dissolve. Then clean with (if possible deionised) mild water and bicarbonate rinse and wipe dry as usual with care.

To avoid

It is very important to avoid chloride-containing cleansers, especially those containing hydrochloric acids. Hypo chlorite bleachers : if applied accidentally or poured on stainless steel surfaces, should be immediately rinsed off with fresh water; silver cleansers. Not stainless steel wire brushes.

HANS THYGE & CO

Design

A good product is nothing without a good design. Hans Thyge Raunkjaer, together with his team at Hans Thyge & co., in Aarhus, Denmark, creates all our designs since the foundation of the company, back in 2001.

WHY CHOOSE QUADRO?

- **Italian certified quality**

All our range of products are of guaranteed Italian origin. We don't play bad tricks on the people who drink from our taps!

- **High quality raw materials**

We only use AISI304/316 stainless steel in order to guarantee quality and atoxicity. The latter, is totally recyclable and atoxic, since it doesn't undergo any galvanic treatment like brass and doesn't contain lead.

- **Water savings**

Every single product sports an areator which saves water bringing the flow down to 7 litres per minute. This means a very high water saving and environmental help. Tests showed a 20% reduction on water consumption in an average house: the Earth and your wallet will thank you!

- **Small and dynamic company**

We are a small family-owned company and we don't want to be anything else. Few people in order to create a small team that works to offer both quality products and a step-by-step assistance for those who want their wishes come true.

Ecology. In our design and development process, ecological impact is also taken into consideration in addition to design, functional and economics aspects. For this is where the most important factors are already determined that set the course for selection of materials, the manufacturing process, options for assembly, logistics and transport, **reparability** and return to the materials cycle. This overview shows the key aspects for the entire product life cycle that are currently applicable to **QUADRO**.

Sustainability policy. The use of a noble raw material such as stainless steel AISI304 and 316, the flow regulators aerators perlator® honeycomb, carton neutral packages are some of the various product components that guarantee the respect of the environment in which we all live in.

Management systems - ISO 9001. Uni en vision 2000. In order to safeguard and optimize the high quality of products and processes, a far-reaching quality management system was set up as early as 2005 which has since been certified in accordance with the **ISO 9001** quality management standard of the international standard organization.

Products certifications. Quadro products are certified according to main internationally relevant testing and inspecting standards regarding product safety and functional integrity.

Aesthetics and design. Sustainable products must be purposive. The timeless archetypal design of **Quadro** htr ranges includes their useful intuitively operable functions and the enduring quality of materials.

Materials. The materials used are subject to stringent controls and recyclables are preferred as long-life concepts.

Longevity and guarantee. The ranges set standards for product design that is sustainable in the most optimal way. The durability of the high-quality materials used, the innovative functional concepts and the archetypal understated design guarantee usability for many decades. We give a 5 years manufacturers guarantee on the cartridge with thus provides a serious planning and specify time frame.

Company principles

Truthfulness in product design. Ecologically oriented design principles are a natural and integral part of the product born and development. **Hans Thyge Raunkjaer** is active in focusing the attention on clean and minimal lines so that the beauty of the simplicity is at its maximum.

Fairness in cooperation. We focus on people. This implies a cooperative style of management that recognize employees representatives as being co creators of the daily life in the company.

VOLCANO

The volcano is one of the **absolute archetype figures** in our memory. It has a mythological fascination: it pours out liquid straight from deep down the earth. Volcano, like volcanoes, has a powerful way of leading the water “out of the ground” by pouring directly up through the **offset conical** form and into the spout. The whole series is realised in **AISI316** stainless steel.

OCEAN

The design of Ocean is extremely architectonical, but still with an organic touch. The handle has got volume and a solid touch, working like a handle on a bicycle. A firm, solid tap with a voluminous handle that grows out of the basic, essential form. **Ocean is the powerful sea and rolling waves.**

STAINLESS STEEL

30 03

30 01

Handle available in white, black pom and stainless steel (polished and satin).

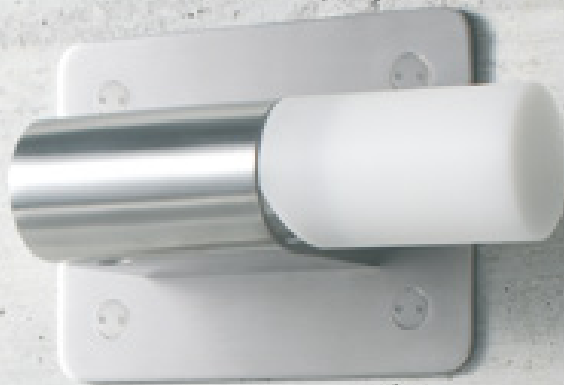

30 01

Wash basin mixer with white handle. Available with stainless steel base. AISI316.

Waterflow with inserted areator. Water flow rate of 30 01 is 10lts/min with a 25mm cartridge.

30 03

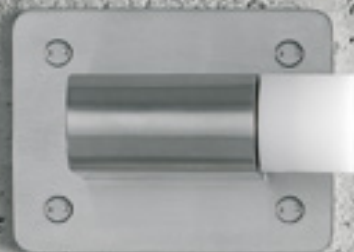

Combination for wall wash basin made up from the mixing module AISI316 and spout module. White POM handle.

Cascade free outflow. On art 30 05 18,72 lt/min at 3bar pressure. Supplied with hexagonal head screws (here shown with two dots screws)

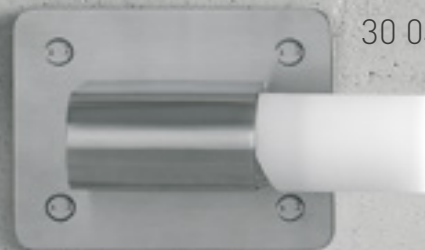

30 42

ONO

STAINLESS STEEL

Ono is the living-proof of the pure scandinavian design. It is at the same time **straight and sophisticated**, simple and complex. Its archetipal shape tranforms a tap into a timeless piece. Without any superficial detail, only pure essence, pure tap.

Taps in AISI 304 stainless steel, satin finish. . In order to get water saving, all wash-basin and bidet spouts are equipped with 5 l/min aerators. If the spouts are used for bath filling, aerators of greater flow rate are available.

90 01

Wash basin tap.

90 60

External bath/shower tap combined with duplex shower (sold separately) set made up of: stainless steel flexible hose, handshower with anti-limescale nozzles and fixed support.

90 63

Bath/shower concealed taps made up of: spout, handles and diverter. Duplex shower set made up of: water outlet, pvc covered handshower

Waterflow with total open aerator at 24lt/min at 3 bar.

SOURCE

STAINLESS STEEL

Taps in AISI 304/316 stainless steel, satin and polished finish. Essential design meets functionality. The **simplest and most minimal shapes** give to the range unique values, such as adaptability, resistance, durability and elegance. Source is the basic line within our bathroom range, always in stainless steel, in order to guarantee the highest standards. In order to get water saving, all wash-basin and bidet spouts are equipped with 5 l/min aerators. If the spouts are used for bath filling, aerators of greater flow rate are available.
