LIGHTER  
STRONGER

FEINWERK  PAVERS

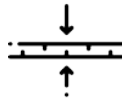

# The Feinwerk difference

## Thinner, lighter, stronger

Feinwerk Pavers are made of stronger stuff. With a high cement content and fibre reinforcement, we can make our pavers thinner and lighter without compromising on strength. Our professional-quality pavers are safer to carry with reduced risk of injury, easier to work with, and better for precision installation.

- 30mm thickness
- 25% lighter than standard pavers
- 40 MPa concrete strength

## 21st Century paving technology

Feinwerk Pavers is New Zealand's leading automated paving manufacturer. With our manufacturing technology, we can produce pavers that are stronger, lighter and of consistent size and quality with reduced environmental impact. Our manufacturing plant minimises plant waste, recycles materials and uses less packaging than manually produced pavers.

Recycle

Less waste

## Environmental sustainability

We are constantly improving our sustainability as a company. Feinwerk Pavers have separators built into them so they can be stacked vertically on a pallet without wasteful polystyrene or cellair packers. Our pallets are made of untreated timber, and you don't need to send them back. This means no costly and carbon-intensive return shipping.

No polystyrene

Efficient stacking

One way pallets
